ISCOR AI - Screening Report

Risk Level: Low (56% confidence)

Probabilities: Low 56% | Moderate 10% | High 34%

Top Driving Factors

(-) Academic Pressure (Higher than 0% of similar students)
Maintaining or increasing your Academic Pressure helps protect against higher risk.

(-) Fi

Maintaining or increasing your Financial Stress helps protect against higher risk.

(-) Ac

Maintaining or increasing your Academic Load helps protect against higher risk.

(-) St

Maintaining or increasing your Stress Index helps protect against higher risk.

Explanation

Thank you for completing this wellness check-in. Your responses indicate that your current mental health risk level is low. This suggests that you are currently in a good position to navigate the usual demands of student life.

According to the screening, several key areas of your life are currently helping to keep your mental health risk low. Specifically, your manageable levels of academic workload and academic pressure are serving as protective factors right now. Your responses also suggest that your financial stress and your overall stress index are at levels that are not putting a heavy burden on your well-being.

While these results are encouraging, we know that student life constantly changes and new challenges can arise. Keeping these key areas-like your workload and everyday stress-in a healthy balance is an ongoing process. Please remember that resources and support are always here to help you maintain this positive momentum.

Wellness Suggestions

Hello! It is wonderful to see that your screening indicates a low mental health risk, reflecting the great work you are already doing to manage your life as a student.

To help you maintain this positive momentum and support the areas highlighted in your screening-such as academic workload, academic pressure, financial stress, and overall stress levels-here are five lifestyle-focused options you might explore:

1. Optimize Your Academic Workload with Time-Blocking: To keep your academic workload feeling highly manageable, you might consider experimenting with time-blocking or the Pomodoro technique (studying for 25 minutes followed by a 5-minute break). This can help you maintain a steady, stress-free pace with your coursework.

2. Explore Low-Cost Social and Campus Activities: To support your financial peace of mind while staying socially active, you could look into free student events, campus recreation programs, or local student discounts. Finding budget-friendly ways to connect with others is a great option for keeping financial stress low.

3. Incorporate Micro-Relaxation Breaks: To keep your overall stress index in a healthy, low range, you might want to try integrating brief "reset" moments into your day. Taking just five minutes between classes for deep breathing, a quick stretch, or a short walk outside can help keep your mind clear and calm.

4. Form Low-Pressure Study Groups: To keep academic pressure light and collaborative, an option to explore is forming casual study groups with peers. Sharing the learning process with classmates is a wonderful way to combine social connection with your academic habits.

5. Establish a Consistent Wind-Down Routine: To protect your balanced energy levels, you might try setting a relaxing evening routine, such as turning off academic screens 30 minutes before bed. Prioritizing consistent sleep hygiene is a great lifestyle step to ensure you feel refreshed and ready for your daily schedule.

Weekly Plan

Here is a simple, 7-day lifestyle plan designed to help you maintain your low risk levels and keep managing your academic, financial, and overall stress effectively:

* Day 1 (Academic Workload): Block out specific times for your study sessions today to keep your coursework structured and highly manageable.
* Day 2 (Financial Stress): Spend 10 minutes reviewing your weekly budget to maintain easy control over your personal finances.
* Day 3 (Overall Stress): Take a relaxing 15-minute walk outdoors today to naturally keep your overall stress levels low.
* Day 4 (Academic Pressure): Write down your upcoming assignments and break one larger task into three small, easily achievable steps.
* Day 5 (Financial Stress): Plan a cost-free recreational activity, like a local park visit or a movie night at home, to enjoy yourself without spending money.
* Day 6 (Academic Workload & Pressure): Set up a clean, quiet study space and use a simple timer to take a five-minute break for every 25 minutes of focused work.
* Day 7 (Overall Stress): Dedicate 30 minutes tonight to a relaxing hobby or a consistent bedtime routine to wind down and prepare for the upcoming week.
